

What is claimed is:

1. A tub assembly in a drum-type washing machine, comprising:
a tub body having a cylindrical shape forming front and rear edge portions;
a ring-type tub cover coupled with the front edge portion of the tub body;
a tub back, coupled with the rear edge portion of the tub body, comprised of an outer circumference wall rising vertically to a predetermined height with respect to an outer circumference of a circular panel forming a recessed space, the outer circumference wall in tight contact with the rear edge portion of the tub body; and
a motor assembly loaded at the recessed space.
2. The tub assembly as claimed in claim 1, wherein the tub back is weld-coupled with an inner surface of the tub body.
3. The tub assembly as claimed in claim 1, further comprising a bearing housing, wherein the tub body, the tub back, and the bearing housing are coupled by a coupling member.
4. The tub assembly as claimed in claim 3, wherein the coupling member is a bolt.
